

As a traveler (often drive) I find XM radios' Instant Traffic and Weather reports at the touch of a button, extremely useful and beneficial. I pay for this service. As opposed to radio broadcast where I have to guess when travel information is going to be aired and have to listen to thirty minutes of advertisement before it. I would like to let the FCC know that I am opposed the NAB's petition 04-160. I pay for satellite radio, and this is one of the reasons why.

Thank you,  
John Moritz
